We have 20 years of experience in laboratory and radiology, and understand exactly what it takes to provide your facility the best possible service. ♦ The acuity level of the population we serve requires fast, accurate results to ensure optimal health for the residents. ♦ We select the best possible providers for your geographic area, and prefer those which are community based in order to achieve this goal. ♦ Through our strategic network of local providers called PLAN (Pooled Laboratory Access Network) we can serve the needs of an entire chain or a single facility by offering better service and standardized systems.

You are no longer dependent on a centralized provider who transports your samples hundreds of miles in traffic only to reach a laboratory which is backed up with samples from hundreds of buildings state wide. ♦ Partner with Outreach Solutions and you will experience the following benefits:

Faster test results ♦ Most results before noonAccurate results ♦ Specimens are placed on the instrumentation immediatelyBetter resources/relationships ♦ Your peers at the hospital provide you access to resources to better serve your residents.
